Patent No. US20020136689A1

GENERAL INFORMATION:
APPLICANT: Reiter, Robert E.
APPLICANT: Saffran, Douglas C.
TITLE OF INVENTION: PSCA: PROSTATE STEM CELL ANTIGEN AND USES THEREOF
FILE REPERENCE: 30435, 544132
PRIOR APPLICATION NUMBER: US/09/934,773

CURRENT APPLICATION NUMBER: US/09/934,773

CURRENT APPLICATION NUMBER: 09/564,329
PRIOR APPLICATION NUMBER: 09/564,329
PRIOR APPLICATION NUMBER: 09/359,326

PRIOR APPLICATION NUMBER: 60/014,675

PRIOR APPLICATION NUMBER: 60/014,675

PRIOR APPLICATION NUMBER: 60/11,141

PRIOR APPLICATION NUMBER: 60/113,200

PRIOR PILING DATE: 1999-02-13

PRIOR FILING DATE: 1999-02-16

PRIOR FILING DATE: 1999-02-16

                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                   US-09-934-586A-2

                                                                                                                                                                                                                       This polypeptide comprises a novel human prostate-specific cell surface antigen (PSCA) that is widely over-expressed across all stages of prostate cancer, including high grade prostate across all intrappithelial neoplasia and androgen-dependent and -independent intrappithelial neoplasia and androgen-dependent and -independent prostate tumours. The amino acid sequence was deduced from isolated cDNA clones (see AAN31861), and contains the highly conserved cysteine residues of the Ly-6/Thy-1 gene family, as well as showing homology to GPI-anchored proteins. PSCA proteins may be used as diagnostic and/or prognostic markers of prostate cancer. PSCA (or encoding nucleic acids) can also be used therapputically in vaccines, in assays to isolate ligands or other binding agents in vaccines antibodies. PSCA antibodies are useful in diagnostic/prognostic assays to detect PSCA, e.g. to diagnose or monitor the progress of prostate cancer in subjects. Claimed immunoconjugates, including an antigen binding region (see AMM70523-24) of the antibody and a toxin agent such as ricin, can be used to selectively kill cells expressing PSCA antigens (claimed) and a toxin agent such as ricin, can be used to selectively kill cells expressing PSCA antigens (claimed) and a loss of producing pSCA protein are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

```
This sequence represents a PS116 antigen. The PS116 gene sequences were isolated as expressed sequence tag (BST) clone of the PS116 gene isolated from a human prostate tissue library. The PS116 sequences can be used in the method of the invention for detecting a target PS116 polynucleotide (PN), that comprises: contacting a sample with at least 1 PS116-specific PN or complement; and detecting the target PS116 polynucleotide (PN), that comprises: contacting the target PS116 polynucleotide (PN), that comprises: contacting the target PS116 polynucleotide (PN), as at least 50% identity with the PS116 sequences. The PNs, PS116 polypeptides (such as this sequence) or PS116 amplicons are used to detect prostate disease. Antibodies (ABs) against PS116 are used to attached to a solid phase. The polypeptides are used for detecting attached to a solid phase. The polypeptides are used for detecting PS116 specific ABs in a sample, and for producing Abs after immunishing subject to obtain Abs. The CDNs and polypeptides are useful for detecting, diagnosing, staging, monitoring, prognosticating, in vivo taging, preventing, treating or determining the predisposition of a subject to diseases and conditions of the prostate, such as prostate enterming the predisposition of a subject the diseases and conditions of the prostate, such as prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 VISKGCSLNCVDDSQDYYVGKKNITCCDTDLCNXSGAHALQPAAAILALLPALGLLWGP 120

                                                                                                                                                                                                                                            from urinary tract tissue. The invention relates to a method of detecting the presence of a target UT116 polynucleotide in a test sample using UT116 gene specific sequences (AAV80136 to AAV80139). Host cells transfected with an expression vector containing the UT116 gene can be used to produce a UT116 polypeptide recombinantly. This polypeptide has at least one UT116 polypeptide recombinantly. This polypeptide has UT116 antigen in a test sample. The polynucleotides and polypeptides are useful for detecting, diagnosing, monitoring, staging, prognosticating, in vivo imaging, preventing, treating or determining the predisposition of a subject to diseases and conditions of the urinary tract, such as urinary tract cancer. Antibodies specifically binding to an epitope of UT116 antigen, and agonists are useful for treating urinary tract

The present sequence is the human Prostate Stem Cell Antigen (PSCA).

PSCA is a glycosylphosphatidylinositol (GPI)-anchored cell surface antigen, which is expressed across a variety of normal cells: prostate cells, urothelium, renal collecting ducts, colonic neuroendocrine cells, placenta, bladder and ureteral transitional epithelial cells. However, psch is widely over-expressed across all stages of prostate cancer, including high grade prostatic intraeppithelial neoplasia (PIN), androgen-dependent and androgen-independent prostate tumours and bladder carcinoma. The expression of PSCA appears to correlate with increasing grade and so PSCA may be used as a prostate cancer, to discriminate between malignant prostate cancers, normal prostate glands and non-malignant neoplasias. It is hypothesised that PSCA may play a call entipension and or proliferation. The PSCA gene has been localised to chromosome 80434.2. Fragments of the present sequence (AAY99712, AAY99713 and AAY99714) may be used as antigens to produce antibodies grants and prostate cancer. The antibodies may then be used to detect and quantify the presence of PSCA proteins is samples and hence diagnose and prognose prostate cancer. The antibodies may also be used in the treatment of cancers associated with PSCA by inhibiting its expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 VISKGCSLNCVDDSQDYYVGKKNITCCDTDLCNXSGAHALQPAAAILALLPALGLLLWGP 120

The present sequence is human prostate stem cell antigen (PSCA).

PSCA is a single subunit glycoprotein that is expressed on the cell subunit glycoprotein that is expressed on the protein. The present invention relates to anti-PSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody cancer cells. PSCA is useful for specifically targetting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cells. The antibodies are also useful for treating the above mentioned cancers and for diagnosing and steging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating

The present invention relates to new antibodies that specifically bind a novel prostate stem cell antigen (PSCA), which is widely over-expressed across all stages of prostate cancer. The antibodies of the invention are useful to kill tumour cells expressing PSCA and as PSCA expression is observed in prostate tumour cells and in other human cancers, particularly bladder and pancreatic carcinomas, the antibodies are useful therapeutically to treat these diseases. In particular, monoclonal antibodies can be administered to subjects suffering from PSCA-associated

prostate, bladder or parcreatic cancer, to inhibit the cancer and prolong the subject's life. The antibodies can be combined with a therapeutic agent in immunoconjugates useful to treat subjects suffering from malignant diseases, characterised by cells having PSCA antigen on the cell surface e.g. cancers, by killing the cells. The antibodies and immunoconjugates may also be included with a carrier in pharmaceutical compositions useful to kill human cells expressing PSCA antigen on the cell surface. The antibodies are also useful diagnostically to detect cancer, especially prostate cancer, to isolate prostate cancer cells compounds, assist in identification of rare genes associated with prostate cancer, and to isolate and purify PSCA and PSCA homologues.

The present amino acid sequence represents the human prostate stem cells antigen (PSCA) protein of the invention.

```
The present invention describes a method for detecting a bladder cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is 80 % identical to a table of sequences (see ACC50951 to ACC5095). ACC50951 to ACC51059 trable of sequences cancer-associated proteins given in ABR48146 to ABR48342). Bladder cancer-associated sequences from the present invention have cytostatic activities, and can be used for detecting a bladder cancer-associated transcript in a cell from a patient. The method can be used for detecting a bladder cancer-associated transcript in a cell from a patient. The method is useful in diagnosing or treating bladder cancer and in screening for compounds that modulate bladder cancer, and is screening for the nucleic acid molecules from the present invention may be used in various screening and diagnostic methods, and for gene therapy, vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

The present invention describes an isolated epitope (I) and an epitope cluster. Also described is a vaccine or immunotherapeutic composition (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunotherapeutic composition. VC is also useful for evaluating camposition, by administering VC to an HLA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a T cell and evaluating immunogenicity. (I) is useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises ELISPOT analysis, complimiting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PCR). ABQ83843 to ABQ83858 and ABP74128 to the ABP7413 represent sequences used in the exemplification of the present

```
The present sequence represents human stem cell antigen 2 (SCAH-2). SCAH proteins can be administered therapeutically, e.g. to inhibit or reverse the development of tumours. Antibodies to SCAH proteins can be used in diagnostic tests for conditions associated with protein expression in bological samples, by combining a sample with the antibody under conditions suitable for antibody binding to the protein to form a complex, and detecting the complex. Antibodies to SCAH-2 are especially useful in diagnostic tests for conditions such as leukaemias or malignant local tumours associated with SCAH-2 expression. SCAH-1 and SCAH-2 have homology to Sca-2 and other stem cell antigens, and have characteristics of the LV-6 family of cysteine rich proteins. The functional similarities among LV-6 family proteins previously reported, and the expression of SCAH-1 and SCAH-2 in tumours from several tissues (e.g. breast, lung, bladder) indicated that SCAH proteins may be useful as anticancer agents; SCAH antibodies, antagonists or inhibitors indicated using the proteins could also be useful in anticancer receiption and autoimmune diseases e.g. lupus nephritis. The nucleic acid sequences encoding SCAH proteins are also useful therapeutically to rejection and autoimmune diseases e.g. lupus nephritis. The nucleic acid sequences encoding SCAH proteins are also useful therapeutically to treat, e.g. leukaemias and cancers of the bladder or breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              122

                                                                                                             All of the proteins exist in the cell membrane, so are considered to be proteins controlling the proliferation and differentiation of the cells. They may be useful as carcinostatic agents or as antigens for preparing antibodies against the proteins. The CDNAs can be used as probes for gene diagnosis and gene sources for gene therapy, as well as for protein may be associated with signal transduction associated with spoptosis, and therefore useful in inhibition of apoptosis. The HP01962 (see AAY13943) protein can be used to treat diseases associated with phopshatidlethanolamine N-methyltransferase. The proteins are identified by the presence of a hydrophobic transmembrane region, knowledge of the protein is not required, as in e.g. methods of

The present invention describes a method of treating cancer associated with prostate stem cell antigen (PSCA) by administering an antibody which selectively binds to PSCA and inhibits the growth of the cancer cells. The PSCA gene is found on human chromosome 8q24.2. The invention provides the human and murine PSCA protein and coding sequences, which can be used not only in the treatment of, but also in detection and prognosis of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                       65 GCSLNCVDDSQDYYVGKKNITCCDTDLCNXSGAHALQPAAAILALLPALGLLLWGPGQL 123
                                                                                                                                                                                                      polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antegonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. Augs6128-AAU86162 represent the human PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Secreted protein; transmembrane protein; human; enterocolitis; Zollinger-Ellison syndrome; gastrointestinal ulceration; congenital microvilus atrophy; skin disease; cell growth; abnormal keratinocyte differentiation; psoriasis; epithelial cancer; Parkinson's disease; Alshaimer's disease; Als, neuropathy; fibromodulin; dermal scarring; Usher Syndrome; Atrophia areata;

AAY13344-403 represent secreted and transmembrane human proteins. The CDNA sequences are obtained from CDNA libraries, prepared from fetal lung, fetal skidney, fetal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions and the repair of acute and chronic mucosal lesions ulceration ulceration and congenital microvillus atrophy, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated human genes and polypeptides used in, e.g. treatment of gastrointestinal ulceration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wood WI, Yuan J;

                Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PRO264 can be used as a target for anti-tunor drugs. PRO533 may be used in the treatment of Usher Syndrome or Atrophia areata; PRO569 can be used as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endomecrium, blood vessels, or related tissue, e.g. in the heart of genital tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel anti-prostate stem cell antigen (PSCA) antibody that internalizes on binding to PSCA on mammalian cell and inhibits growth of PSCA-expressing cancer cells in vivo, useful for killing PSCA-expressing cancer cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is cynomolgus (monkey) type II prostate stem cell antigen (PSCA). PSCA is a single subunit glycoprotein that is expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cynomolgus (monkey) type II prostate stem cell antigen (PSCA) protein.

                  protein. The present invention relates to anti-BSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the cancer cells. PSCA is useful for specifically targetting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cells. The antibodies are also useful for treating the above mentioned cancers and for diagnosing and staging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating cancers by gene therapy techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

```
The present sequence is cynomolgus (monkey) type I prostate stem cell antigen (PSCA). PSCA is a single subunit glycoprotein that is expressed on the cell surface as a glycosylphosphatidylinositol (GPI)—anchored protein. The present invention relates to anti-PSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the conjugated to a toxin or a radioactive isotope is used for killing the cancer cells in vivo and for inhibiting the above mentioned cancers and for inhibiting the above mentioned cancers and for immunopracipitation of PSCA-expressing cancer, for purification of or immunopracipitation of PSCA from cells, and for detection and quantitation of PSCA from cells, and for detection and quantitation of pSCA humines.
on binding to PSCA on mammalian cell and inhibits growth of PSCA-expressing cancer cells in vivo, useful for killing PSCA-expressing cancer cells -
                                                                                                             Example 6; Fig 15; 112pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                The present sequence represents human stem cell antigen 2 (SCAH-2). SCAH proteins can be administered therapeutically, e.g. to inhibit or reverse the development of tumours. Antibodies to SCAH proteins can be used in diagnostic tests for conditions associated with protein cap be used in biological samples, by combining a sample with the antibody under conditions suitable for antibody binding to the protein to form a complex, and detecting the complex. Antibodies to SCAH-2 are especially useful in diagnostic tests for conditions/diseases such as leukaemias or malignant local tumours associated with SCAH-2 expression. SCAH-1 and SCAH-2 have homology to Sca-2 and other stem cell antigens, and have characteristics of the LV-6 family proteins previously reported, and the expression of SCAH-1 and SCAH-2 in tumours from several tissues (e.g. breast, lung, bladder) indicated that SCAH proteins may be useful as anticancer agents; SCAH antibodies, antigoniers or inhibitors identified using the proteins could also be useful in anticancer criection and autoimmune diseases e.g. lungs nephritis. The nucleic acid sequences encoding SCAH partiboses or jupus nephritis. The nucleic acid sequences encoding SCAH partiboses or jupus nephritis. The nucleic acid sequences encoding SCAH partiboses or jupus nephritis. The nucleic acid sequences encoding SCAH partiboses or jupus nephritis. The nucleic acid sequences encoding SCAH proteins are also useful therapeutically to treat, e.g. leukaemias and cancers of the bladder or breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 VISKGCSLNCVDDSQDYYVGKKNITCCDTDLCNXSCAHALQPAAAILALLPALGLLLWGP 120

```
surface antigen (PSCA) that is widely over-expressed across all stages of prostate cancer, including high grade prostate intraepithelial neoplasia and antorgen-dependent and independent prostate tumours. The amino acid sequence was deduced from prostate tumours. The amino acid sequence was deduced from isolated cDNA clones (see AAV33691), and contains the highly conserved cysteine residues of the Ly-6/Thy-1 gene family, as well as showing homology to GPI-anchored process. PSCA proteins may be used as diagnostic and/or prognostic markers of prostate cancer. PSCA (or encoding nucleic acids) can also be used therapeutically in vaccines, in assays to isolate ligands or other binding agents of and to produce antibodies. PSCA antibodies are useful in diagnostic/prognostic assays to detect PSCA, e.g. to diagnose or monitor the progress of prostate cancer in subjects. Claimed immunoconjugates, including an antigen binding region (see AAV70523-24) of the antibody and a toxin agent such as ricin, can be used to selectively kill cells expressing PSCA antigens (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, expressed sequence tag, EST; prostate disease, diagnosis, tumour; detection, therapy, prostate cancer, metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MKAVILLALLMAGLALQPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLT

This represents the consensus sequence of the UT116 polypeptide, derived derow urinary tract tissue. The invention relates to a method of detecting the presence of a target UT116 polynucleotide in a test sample using UT116 gene-specific sequences (AAV80386 to AAV80397). Host cells transfected with an expression vector containing the UT116 gene can be used to produce a UT116 polypeptide recombinantly. This polypeptide has at least one UT116 epitope which can be used in a method for detecting UT116 antigen in a test sample. The polynucleotides and polypeptides are useful for detecting, ingenorating, reacting, monitoring, steaging, prognosticating, in vivo imaging, preventing, treating or determining the predisposition of a subject to diseases and conditions of the urinary tract, such as urinary tract cancer. Antibodies specifically binding to an epitope of UT116 antigen, and agonists are useful for treating urinary tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MKAVLLALLMAGLALQPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLT 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a PS116 antigen. The PS116 gene sequences were isolated as expressed sequence tag (EST) clone of the PS116 gene isolated from a human protectet tissue library. The PS116 sequences can be used in the method of the invention of detecting a target PS116 polymucleotide (PN), that comprises: contacting a sample with at least 1 PS116-specific PN or complement; and detecting the target PS116 pN, where the specific PN has at least 50% identity with the PS116 samplesones. The PNs, PS116 polypeptides (such as this sequence) or PS116 amplicons are used to detect prostate disease. Antibodies (Abs) against PS116 are used in assay kits to detect prostate disease. Antibodies (Abs) and the Abs are preferably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 attached to a solid phase. The polypepides are used for detecting PS116-specific Abs in a sample, and for producing Abs after immunising a subject. Plasmids encoding PS116 epitopes can also be administered to a subject to obtain Abs. The coNAs and polypepides are useful for detecting, diagnosing, staging, monitoring, prognosticating, in vivo imaging, preventing, treating or determining the predisposition of a subject to diseases and conditions of the prostate, such as prostate cancer. The Abs and agonists or inhibitors are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MKAVILLALIMAGLALÓPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLT 60

The present sequence is the human Prostate Stem Cell Antigen (PSCA).

PSCA is a glycosylphosphatidylinositol (GPI)-anchored cell surface
antigen, which is expressed across a variety of normal cells; prostate
cells, urothelium, renal collecting ducts, colonic neuroendocrine cells,
placenta, bladder and ureteral transitional epithelial cells. However,
pscA is widaly over-expressed across all stages of prostate cancer,
including high grade prostatic intraepithelial neoplasia (PIN),
androgen-dependent and androgen-independent prostate tumours and bladder
carcinoma. The expression of FSCA appears to correlate with increasing
grade and so PSCA may be used as a prostate cancer marker, to
discriminate between malignant prostate cancers, normal prostate glands
and non-malignant neoplasias. It is-hypothesised that PSCA may play a
role in stem/progenitor cell function such as self-renewal
corromosome 8024.2. Fragments of the present sequence (AAN99712,
AAY99713 and AAX99714) may be used as antigens to produce antibodies
against PSCA. The antibodies may then be used to detect and quantify the
prostate cancer. The antibodies may also be used in the treatment of
cancers associated with PSCA by inhibiting its expression.

The present sequence is human prostate stem cell antigen (PSCA). PSCA is a single subunit glycoprotein that is expressed on the cell surface as a glycosylphosphatidyinositol (GPI)-anchored protein. The present invention relates to anti-PSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the cancer cells. PSCA is useful for specifically targetting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cells. The antibodies are also useful for treating the above mentioned cancers and cor diagnosing and steging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel anti-prostate stem cell antigen (PSCA) antibody that internalizes on binding to PSCA on mammalian cell and inhibits growth of PSCA-expressing cancer cells in vivo, useful for killing PSCA-expressing cancer cells .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MKAVLALLMAGLALQPGTALLCYSCKAQVSNEDCLQVENCTQLGGQCWTARIRAVGLLT

The present invention relates to new antibodies that specifically bind a novel prostate stem cell antigen (PSCA), which is widely over-expressed across all stages of prostate cancer. The antibodies of the invention care useful to kill tumour cells expressing PSCA and as PSCA expression is observed in prostate tumour cells expressing PSCA and as PSCA expression is particularly bladder and pancreatic carcinomas, the antibodies are useful therapeutically to treat these diseases. In particular, monoclonal cancers, e.g. prostate, bladder or pancreatic cancer or metastatic prostate, bladder or pancreatic cancer, to inhibit the cancer and prolong the subject's life. The antibodies can be combined with a therapeutic agent in immunoconjugates useful to treat subjects suffering from malignant diseases, characterised by cells having PSCA antigen on the cent of the subject of the subject of the subject of the subject of the cancer and prolong malignant diseases, characterised by cells having PSCA antigen on the compositions useful to kill human cells expressing PSCA antigen on the compositions useful to kill human cells expressing PSCA antigen on the cancer and prolong and immunoconjugates are also useful diagnostically to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cancers, especially prostate cancer, to isolate prostate cancer cells

The method comprises contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is 80 % identical to a table of sequences (see ACC50951 to ACC51059). ACC50951 to ACC51059 encode the human bladder cancer-associated proteins given in ABR48146 to ABR4822). Bladder cancer-associated proteins given in ABR48146 to ABR48221. Bladder cancer-associated sequences from the present invention have cytostatic activities, and can be used in antisense gene therapy and in vaccine production. The method can be used for detecting a bladder cancer-associated transcript in a cell from a patient. The method is useful in diagnosing or treating bladder cancer and in screening for compounds that modulate bladder cancer and in screening for compounds that modulate bladder cancer, such as hormones or antibodies. The nucleic acid molecules from the present invention may be used in
                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                  9
                 compounds, assist in identification of rare genes associated with prostate cancer, and to isolate and purify PSCA and PSCA homologues. The present amino acid sequence represents the human prostate stem cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detecting a bladder cancer-associated transcript in a cell from a patient, comprises contacting a biological sample from the patient with a bladder cancer-associated polynucleotide or antibody
                                                                                                                                                                                                                                      1 MKAVLLALLMAGLALQPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLT

The present invention describes a method of treating cancer associated with prostate stem cell antigen (PSCA) by administering an antibody which selectively binds to PSCA and inhibits the growth of the cancer cells. The PSCA gene is found on human chromosome 8Q24.2. The invention provides the human and murine PSCA protein and coding sequences, which can be used not only in the treatment of, but also in detection and prognosis of
                                                                                                                                                                                                        1 MKAVLIALLMAGIALQPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antibodies binding to prostate stem cell antigen inhibit the growth of cancer cells and are used to detect and treat prostate, pancreatic or bladder cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3 AVILALLMAGLALQPGTALLCYSCKAQVSNEDCLQVENCTQLGEQCWTARIRAVGLLTVI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated epitope (I) and an epitope cluster. Also described is a vaccine or immunotherapeutic composition (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunopenicity of a vaccine or immunotherapeutic composition, by administering VC to an HLA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a T cell and evaluating immunogenicity. (I) is useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises ELISPOT analysis, climiting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PCR). ABQ83851 to ABQ83858 and ABP74128 to ABP74713 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leuksemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. AMUSELIS-AAUSSIGS represent the human PRO polypeptides of the invention.
                                                                                                                                                                                                                                                   Human; PRO; benign tumour; malignant tumour; lymphoid malignancy;

                                                                                                                                                                                                                                                                                                                  AAY13144-403 represent secreted and transmembrane human proteins.

The cDNA sequences are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina.

The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. RRO211 and RRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions

(e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell, growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PRO264 can be used as a target for anti-tunor drugs. PRO563 may be used in the treatment of Usher Syndrome or Atrophia areata; PRO569 can be used as anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treatments of the Kidney, uterus, endometrium, bloodvessels, or related tissue, e.g. in the heart of genital tract.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              All of the proteins exist in the cell membrane, so are considered to be proteins controlling the proliferation and differentiation of the cells. They may be useful as carcinostatic agents or as antigons for preparing antibodies against the proteins. The CDNAs can be used as probes for gene diagnosis and gene sources for gene therapy, as well as for large-scale expression of the proteins. The HPD1498 (see AAVI333) protein may be associated with signal transduction associated with appotosis, and therefore useful in inhibition of apoptosis. The HPD1962 (see AAVI3943) protein can be used to treat diseases associated with phopshatidylethanolamine N-methyltransferase. The proteins are identified by the presence of a hydrophobic transmembrane region, knowledge of the protein is not required, as in e.g. methods of
Transmembrane protein; human; cell membrane; proliferation; diagnosis; cell differentiation; carcinostatic agent; probe; gene therapy; signal transduction; apoptosis; inhibitor; phopshatidylethanolamine N-methyltransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer

Claim 20; Page 291; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, and feel of the invention. Although novel polypeptides, or polypeptides of the invention atthough novel, many of the polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell differentiation activities, enceptor or ligand activities, or may concern activity; insue growth activity; insue cetivities, or may be included activities, or may activity; activity, tissue growth activity; chemocapitic or chemokinetic activities, haemocapitic or chemokinetic activities, haemocapitic or themokinetic activities, proliferation or metastasis.

Chemololytic activities, activities, proliferation or metastasis.

Chemololytic activities activities, proliferation or metastasis.

Chemololytic activities or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions and ulcers), and abnormal vacuular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promocapies of purns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, because the call growth factor activity may be used in cell culture to aucentic or auchibit or auchibit or auchibit or auchibite the used to augment or auchib autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug techniques. The present sequence represents a novel human can be used to augment or replace cells damaged by illness, immune disease or accidental damage. The polypeptides and nu polypeptide of the invention.

polypoptides (such as this sequence) or PSI16 amplicons are used to detect prostate disease. Antibodies (Abs) against PSI16 are used in assay kits to detect PSI16 antigen or anti-PSI16 Ab, and the Abs are used in assay bSI16-specific Abs in a sample, and for producing Abs after immunishing a subject. Plasmids encoding PSI16 epitopes can also be administered to a subject to obtain Abs. The cDNAs and polypeptides are useful for detecting, diagnosing, staging, monitoring, prognosticating, in vivo subject to diseases and conditions of the predisposition of a subject to diseases and conditions of the predisposition of a concer. The Abs and agonists or inhibitors are useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       isolated as expressed sequence tag (EST) clone of the PS116 gene isolated from a human prostate tissue library. The PS116 sequences can be used in the method of the invention for detecting a target PS116 polynucleotide (PN), that comprises: contacting a sample with at least 1 PS116-specific PN or complement; and detecting the target PS116 PN, where the specific PN has at least 50% identity with the PS116 sequences. The PNs, PS116
                                                                                                                                                                                                                                                                                           disease; diagnosis; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a PS116 antigen. The PS116 gene sequences were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New method for detecting diseases of the prostate - comprises use of a PS116 polynucleotide, protein or antibodies, useful for preventing and treating prostate infections and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
